

GANGADHARUNI SAI KRISHNA

GOOGLE PROFESSIONAL DATA ENGINEER

Address: Hyderabad, Telangana - 500045 | **Phone:** +91 6309161720 | **Gmail:** gskjune17@gmail.com

PROFESSIONAL SUMMARY

Cloud Data Engineer with 5+ years of hands-on experience in designing and building scalable data pipelines and platforms on Google Cloud Platform (GCP).

Skilled in leveraging GCP services, including BigQuery, Dataproc, Dataflow, Cloud Storage, Cloud Functions, Cloud Composer, and Cloud Data Fusion to implement efficient end-to-end data solutions.

Recent experience in AI & Data Engineering, including working on Generative AI (GenAI) projects and building intelligent agents. Involved in integrating LLM-based solutions with data pipelines, enabling automation, enhanced data interactions, and intelligent decision-making workflows

- Experienced in designing and executing ETL processes to transform, load, and normalize data for optimized storage and analytics in BigQuery.
- Showed excellence in orchestrating workflows using Apache Airflow, including DAG creation, to automate and schedule data processing tasks for efficiency and reliability.
- Knowledgeable in Pub/Sub and Dataflow for real-time data processing, with recent hands-on experience enabling near real-time analytics.
- Skilled in diagnosing and resolving issues in cloud environments, conducting performance analysis, and optimizing resource utilization to improve efficiency and reduce costs.
- Proficient in developing and deploying Cloud Functions to implement serverless computing solutions, enabling seamless integration and execution of event-driven processes within cloud.
- Skilled in utilizing BigQuery to manage and analyze structured and semi-structured data effectively. This includes loading data into various tables and optimizing query performance for rapid insights extraction.
- Hands-on experience in managing on-premises to GCP migrations, implementing secure data storage solutions in GCS, and working with file formats like CSV, JSON, and Parquet.
- Foundational knowledge of big data tools such as Hadoop and Kafka.
- Knowledgeable in cloud data distributed architecture and frameworks.
- Strong experience in working within Agile teams, using tools like JIRA, GitHub, and Confluence for project management and code collaboration.

Dedicated to delivering high-quality, scalable data solutions, while leveraging AI and cloud technologies to enable advanced, data-driven decision-making.

TECHNICAL SUMMARY

Certified Cloud Platforms	: Google Cloud Platform (GCP), Google Professional Data Engineer
Data Engineering Tools & Services	: GCS, BigQuery, Data proc, Cloud Composer and Airflow, Cloud Run Functions, Dataflow (Apache Beam), Pub/Sub, Cloud Data Fusion, PySpark, Cloud SQL, Looker.
AI and Machine Learning	: GenAI, ML Engineering, Agentic AI, Claude
Programming Languages	: Python, SQL, Terraform
Workflow Orchestration	: Airflow, Cloud Composer, VS Code
Big Data Technologies	: Hadoop, Kafka (Basic Expouser)
Project Management Tools	: Agile (Sprint, Scrum), Jira, Confluence, GitLab, GitHub, Jenkins, CICD
Other Tools	: Jupyter Notebook, Data Bricks, Data Buck, Postman.

EMPLOYMENT HISTORY

Senior Software Engineer (Data Engineer)

PRODAPT SOLUTIONS Pvt. Ltd., Hyderabad, Telangana | Feb 2025 – Current

Data Engineer

TRAEGEN SYSTEMS Pvt. Ltd., Bengaluru, Karnataka | Jan 2021 – Jan 2025

PROJECT SUMMARY

PROJECT - 1

Project : AIOps.
Client : VERIZON
Duration : October 2025 –March 2026
Role : GCP Data Engineer
Pod Size : 15

Tools and Technologies : Google Cloud Storage (GCS), BigQuery (BQ), Cloud Composer and Airflow, Python, Looker, GenAI, Agentic AI, Postman, Databuck, GitLab, Confluence, Sprint planning and execution.

Description:

Verizon is a leading telecommunications company focused on leveraging advanced analytics and AI-driven solutions to enhance operational efficiency and monitoring. This project involved building AIOps and AI-integrated data solutions using Google Cloud Platform (GCP), enabling intelligent alerting, observability, and automation. The work included developing data pipelines, implementing monitoring frameworks, and integrating Generative AI (GenAI) for synthetic data generation and AI Agent-based automation. Tools such as Cloud Composer (Airflow), BigQuery, and Looker were used alongside Python and LLM-based solutions (Gemini 2.0, Claude) to enhance data processing, visualization, and AI-driven workflows.

Responsibilities:

- Analyzed project requirements and contributed to designing AIOps data workflows, focusing on monitoring, alerting, and observability.
- Developed BigQuery stored procedures with integrated audit logging, ensuring data traceability and governance.
- Created and managed Airflow (Cloud Composer) DAGs with observability features to monitor pipeline execution, failures, and performance.
- Designed and developed a Master Alert Dashboard in Looker, using LookML to consolidate alerts from multiple dashboards into a centralized monitoring view.
- Collaborated with cross-functional teams to improve alert visibility and operational decision-making.
- Developed synthetic data generation solutions for API testing and development use cases.
- Built two versions of synthetic data generators:
 - Python-based generator for rule-based structured data
 - LLM-based generator using Gemini 2.0, enabling context-aware and intelligent data generation
- Partnered with AI Connect teams to deliver scalable GenAI-driven data solutions aligned with business needs.
- Worked on AI Agent development for FWA (Fixed Wireless Access) AIOps use case, leveraging internal framework PyVegas to build intelligent agents for automation.

- Developed an advanced LLM-powered AI Agent using MCP tools and Claude integration, enabling interaction with BigQuery for automated data operations.
- Implemented agent capabilities to read, write, create, and delete BigQuery tables, successfully establishing end-to-end connectivity and automation workflows.
- Integrated GenAI + AI Agents into data engineering pipelines to enable intelligent automation, self-service data operations, and enhanced observability.
- Ensured code quality using GitHub and followed Agile methodologies for iterative development and delivery.
- Documented workflows, architectures, and processes in Confluence to support maintainability and knowledge sharing.

PROJECT - 2

Project : Enterprise Insights
Client : VERIZON
Duration : March 2025 – September 2025
Role : GCP Data Engineer
Pod Size : 8

Tools and Technologies : Google Cloud Storage (GCS), BigQuery (BQ), Cloud Composer and Airflow, PySpark, Dataproc, Hadoop, Linux, Jenkins, CICD, SQL, Python, GitLab, Confluence, Sprint planning and execution.

Description:

Verizon Enterprise Insights project focused on building and optimizing large-scale data processing workflows for business intelligence and analytics. The work involved Airflow orchestration, Dataproc Serverless, HDFS-based processing, SQL optimization, and CI/CD implementation, enabling scalable and efficient data operations across multiple data sources and vendors.

Responsibilities:

- Executed monthly DataPack generation workflows by updating configuration files and triggering Airflow (Cloud Composer) DAGs, ensuring accurate and timely data availability.
- Developed and maintained automated DAG pipelines for DataPack generation, improving **process** reliability and operational efficiency.
- Worked on Foot Traffic data processing, utilizing generated DataPacks to create and manage datasets in HDFS, supporting location-based analytics.
- Optimized SafeGraph data processing pipelines by enhancing SQL query performance, reducing execution time and improving data processing efficiency.
- Designed and implemented Airflow DAGs for SafeGraph workflows, enabling automated, scalable, and fault-tolerant data pipelines.
- Introduced and implemented Dataproc Serverless in existing workflows, improving scalability, **cost** optimization, and operational simplicity.
- Built and integrated end-to-end CI/CD pipelines using Jenkins and GitLab, enabling automated deployment, version control, and faster release cycles.
- Performed data analysis on multiple vendor datasets, generating business insights and reports aligned with stakeholder requirements.
- Collaborated with cross-functional teams to deliver data-driven solutions, ensuring alignment with business goals and analytics needs.
- Followed Agile practices, ensuring continuous improvement, efficient delivery, and proper documentation.

PROJECT - 3

Project : Streamlined Logistics Data Processing for Toyota Astra Motor
Client : TOYOTA ASTRA MOTOR
Duration : April 2023 – January 2025
Role : GCP Data Engineer
Pod Size : 8

Tools and Technologies : Google Cloud Storage (GCS), BigQuery (BQ), Cloud Composer and Airflow, Dataflow, PySpark, DataprocSQL, Python, Looker, GitHub, Confluence, Sprint planning and execution.

Description:

Toyota Astra Motor project focused on building scalable GCP data pipelines for processing vehicle shipment and inventory data. Utilized Dataflow, Dataproc (PySpark), BigQuery, GCS, and Airflow (Cloud Composer) to enable efficient data processing and analytics.

Responsibilities:

- Designed end-to-end data pipeline architecture for shipment and inventory data processing.
- Built and scheduled Airflow (Cloud Composer) DAGs for automated pipeline orchestration.
- Developed Dataflow (Apache Beam) pipelines for data ingestion, cleaning, and transformation.
- Leveraged Dataproc (PySpark) for large-scale data processing, filtering, and aggregation.
- Loaded and transformed data from GCS to BigQuery, including JSON-based structured storage.
- Automated data cleaning using Python scripts to handle duplicates and inconsistencies.
- Generated analytical reports in Looker for delivery performance and inventory insights.
- Used GitHub for version control and followed Agile practices with Confluence documentation.

PROJECT - 4

Project : Lion Parcel Delivery Data Pipeline Optimization
Client : LION PARCEL
Duration : June 2021 – March 2023
Role : GCP Data Engineer
Pod Size : 8

Tools and Technologies : Google Cloud Storage (GCS), BigQuery (BQ), Cloud Composer and Airflow, SQL, Python, Looker, Pub/Sub, GitHub, Confluence, Sprint planning and execution.

Description:

Lion Parcel project focused on optimizing data pipelines on GCP to enable real-time delivery tracking, reporting, and analytics. Leveraged GCS, BigQuery, Dataflow, and Airflow (Cloud Composer) to build scalable and efficient data workflows.

Responsibilities:

- Scheduled pipelines for regular execution and monitored pipeline runs to ensure successful data migration and integrity.
- Developed and scheduled Airflow (Cloud Composer) DAGs to automate end-to-end data pipelines.
- Loaded and transformed data from GCS to BigQuery, implementing business logic for analytics.

- Designed BigQuery datasets and tables (stage & golden layers) with partitioning and clustering for performance optimization.
- Built Dataflow pipelines for data cleaning, filtering, and aggregation.
- Processed and split data into delivered and undelivered streams, storing results in BigQuery.
- Created and maintained MySQL tables for intermediate data handling.
- Generated daily reports using Looker for business insights.
- Ensured pipeline reliability through monitoring, scheduling, and optimization.
- Used GitHub for version control and followed Agile practices with Confluence documentation.

EDUCATIONAL HISTORY

B.Tech

GODAVARI INSTITUTE OF ENGINEERING AND TECHNOLOGY (JNTUK), Rajahmundry, AP. | **2014 – 2017**
